## Do You Fear the Dentist?

### Sedation Dentistry

Imagine relaxing through a dental appointment! It's called "Sedation Dentistry" and it may well be the greatest advance ever made towards truly pain-free and anxiety-free dentistry!

Sedation dentistry allows you to fix years of neglect and worry while comfortably relaxed and unaware. Since you are completely comfortable, relaxed, and pain-free Dr. Ostler can do years of dental treatments in one or two dental visits. If you have dental fears or hate going to the dentist, you may now find your visit at the dentist to be a relaxing and enjoyable one.

With conscious sedation, your team at The Center for Dental Health can fix chipped teeth, broken smiles, and shattered dreams - all pain free and without remembering anything- while you relax in comfort.

## Do You Hate Your CPAP?

### CPAP Alternative Oral Appliances

People with sleep apnea know the importance of a good nights rest. Many simply can't tolerate a CPAP device or prefer not to use one for reasons of convenience or comfort. Modern oral appliance therapy can now help reposition the jaw to open the airway and provide a more restful nights sleep. Dr. Ostler will properly fit the right appliance on your teeth to open and support your airway. If you are tired of your CPAP or want another alternative, please call today for a Dental Sleep Medicine consultation.

## Do You Suffer From Headaches?

### TMJ-Headache Facial Pain Treatments

Migraines and tension headaches are often the hallmark signs of bite problems related to the way the jaws and teeth fit together. When teeth and jaws are not balanced properly, it can result in muscle spasms and headaches. Involvement of the Trigeminal nerve is central to these problems. More drugs are not the answer!

If you suffer from migraines and headaches, relief may be closer than you think! Stabilizing tense muscles and balancing jaw support may very well end your search for relief and reliance on drugs – and help you "take a bite out of the pain".

## Reduce Heart Disease Risk Factors

### Gum Disease Treatments

- ☑ Gum disease is linked to heart disease, strokes, diabetes, kidney disease, cancer, and pregnancy complications!
- ☑ You can lower heart disease risk factors by having healthy gums!
- ☑ Gum disease increases levels of dangerous proteins in the blood - a condition called "systemic inflammation." This increases risk for future heart attacks.
- ☑ Modern dentistry CAN literally save your life.

**If you have heart disease, diabetes, or gum disease, you owe it to yourself and those you love to lower your inflammation risk factors.**
